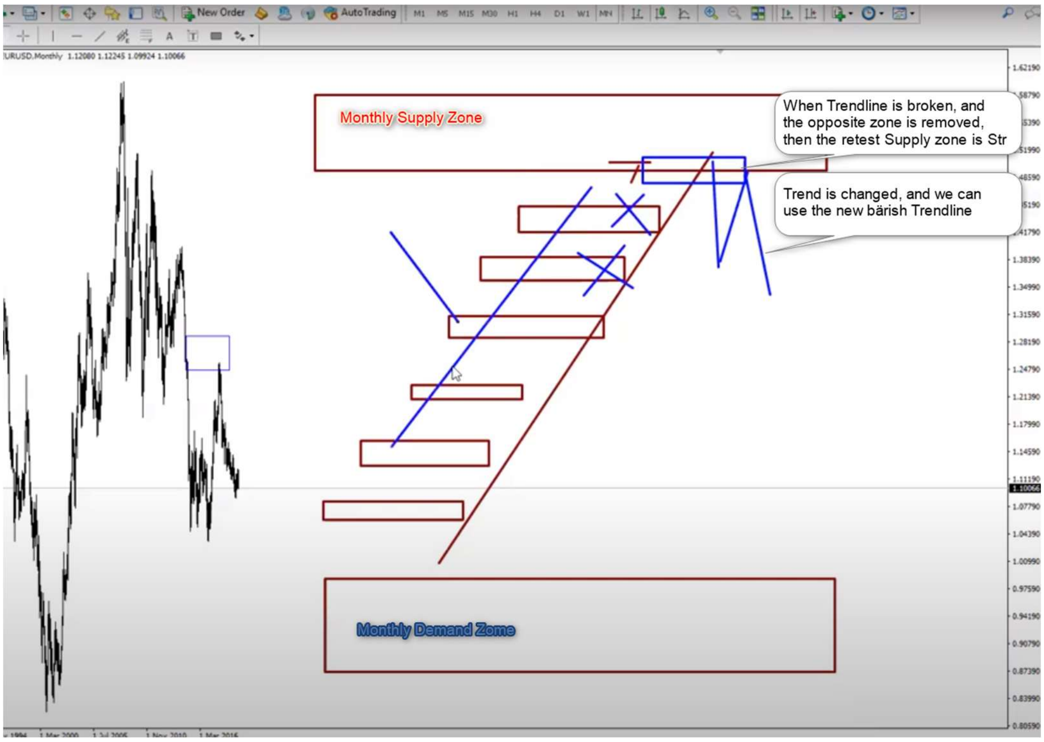
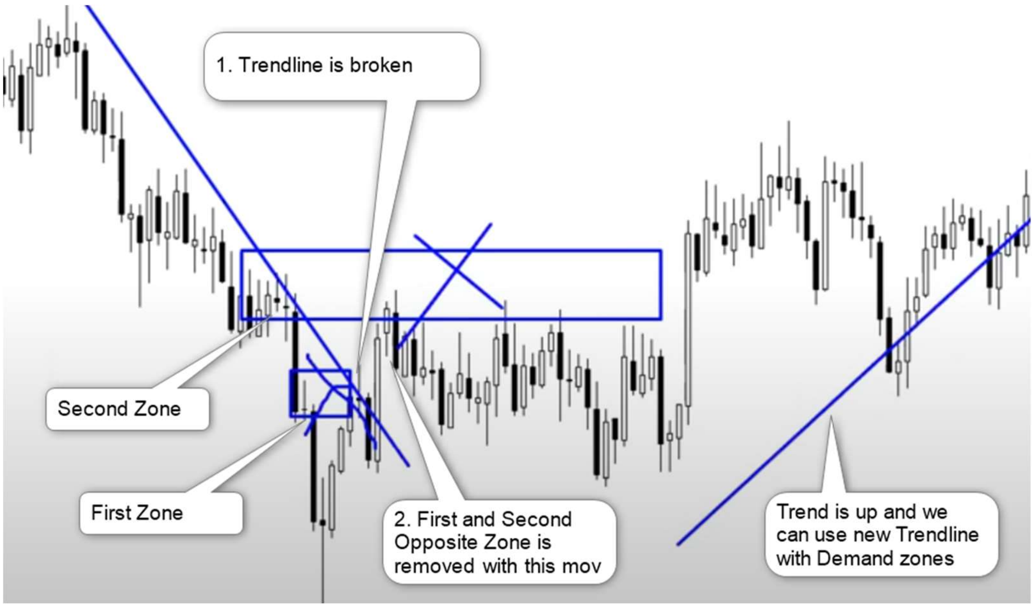
1. Trendline and Stron Zone / Trendchange

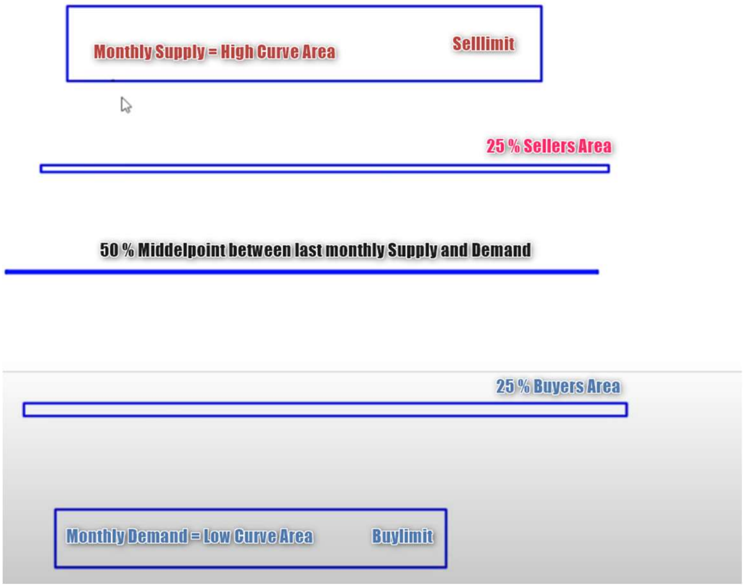
- On Higher Timeframe we use only Strom zones (Monthly)
- In lower Timeframes wie use cp levels
- When market remove the opposite Zone and retest the Supplyzone, then we have strong zone
- When Trendline is broken and opposite Zone is removed, the trend can change.
- For Trendline we use the last 2 Swing High / Lows



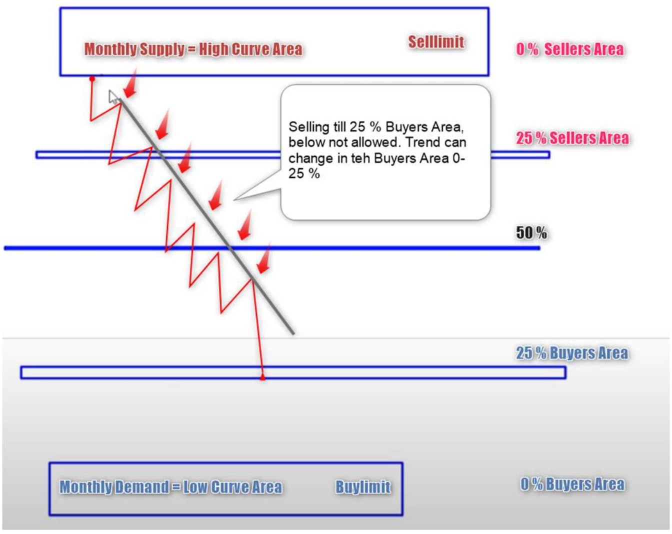


2. High Curve / Low Curve

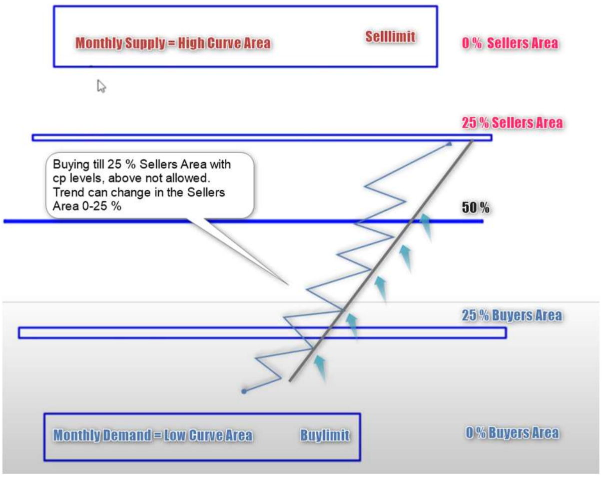
The Market move always between last Monthly Supply and Demand Areas. When the Trendline is broken and opposite Zones are removed, then we draw this Supply and Demand Zones. The Middle oft hem ist he 50 %. This means, when we are in the Buy zone we can buy from Monthly Demand till 25 % Sellers Area (on the Trendline with CP Levels). When we have reached the Sellers area (0-25 %) its not allowed to buy anymore. In this Zone we can sell. This is same Strategy for Selling, when we start with the monthly Supply zone.



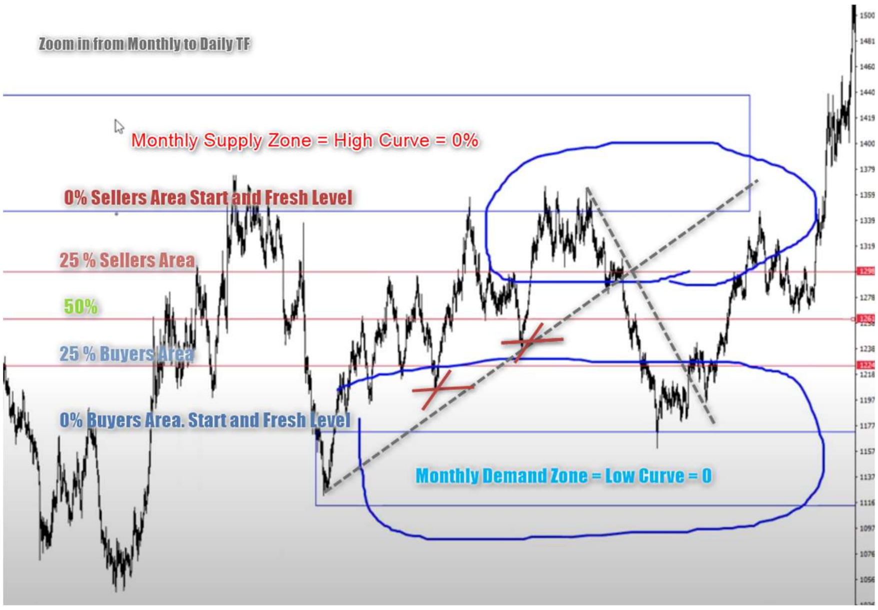
2.1. Sellers



2.2. Buyers



2.3. Exampels



Strong Supply Zone
cp
Opposite is removed
Last Demand Zone
