1. STRONG ZONES	2
2. CONFIRMATIONS.....	3
2.1. Monthly: Confirmation on 4H at 3. Touch.....	3
2.2. Weekly, Daily: Confirmation on 4H at 2. Touch.....	6
3. INHARITANCE ZONES	6
3.1. Flip Zones	6
4. TREND DIRECTION AND CHANGE	7

1. Strong Zones

- When the Levels remove the opposite Zones, then we will take this Zone for our trade.

2. Confirmations

2.1. Monthly: Confirmation on 4H at 3. Touch

- When we have 2 Strong Zone against to each other on monthly Time Frame, we can use Limit Order. On 3. Touch we need confirmations and we will go to lower timeframe → 4H Time Frame
- Confirmation on 4H:
 - We have to wait to remove the supply Zone and wait for cp Levels for our entrys.
 - The cp Levels have to remove the opposite Levels. Then is our CPs Strong Zones as Confirmation

2.2. Weekly, Daily: Confirmation on 4H at 2. Touch

- Daily is risky

3. Inharitance Zones

- No 2. Zone is strong Zone, because it remove the opposite Zone. When the No2. Zone cant hold at 2 / 3. Touch, the market can go up back to No. 1 Zone. No1. Zone is weak Zone. No1 Zone couldnt break the opposite Zone.

3.1. Flip Zones

- In Supply Demand Level we call the Ratracement Flipzone. Is equal to Support & Resistancelevel. In the Movement we can find cp Levels for the entrys.
- The Supply Demand Level cant be retested on Swing high and Swing Low. But it can retest the Flip Zones, where are cp Levels. For the trade we can look for cp Level in the Flip Zones.

4. Trend Direction and Change

- The market moves between monthly Supply and Demand Level
- Monthly is very clear
- When Trendline is broken and we have removed 2 opposite Zones, the market will change the direction. So we can use the new Trendline and Level for the entries.
